1.We can anazise some measurable metrics like work delay, asking for hike, not being punctual to work,often permissions and leaves

2.It is unsupervised because data set and out put column will not be perfect.

3.We can name it as retention analizise AI.

4.

Asked for hike last week.	2 permissions and 1 unwanted leave by this week	High chance of resing
Not asked for any hike or promotion	Always punctual in past two months.	low chance of resing
Withdrawing office social gathering	More late punchins recorded in the past 2 weeks	Moderate chance of resing
